LUCAS ANDRADE DA SILVA (SAMPLE)

Back-End Software Engineer | Java • Spring Boot • Python • SQL (RESTful APIs & Clean Architecture)

São Paulo, SP, Brazil (Remote B2B / Worldwide) • (+55) 11 98765-4321 • lucas.example@email.com • **linkedin.com/in/example-dev** • **github.com/example-dev**

PROFESSIONAL SUMMARY

Back-End Software Engineer focused on designing and building **scalable RESTful APIs, relational database modeling, and clean service architectures**. Strong technical background in **Java (Spring Boot), Python, SQL, and NoSQL**, supported by disciplined Git/GitHub version control, automated unit/integration testing, and query profiling. Employs AI-assisted software engineering workflows as a productivity force-multiplier for rapid **Proof of Concept (PoC)** prototyping and performance benchmarking. Hands-on experience developing automation scripts and resolving production incidents in enterprise environments. Fluent in English.

TECHNICAL SKILLS

Back-End Engineering & Languages: Java (Spring Boot, Hibernate, Maven), Python (FastAPI), SQL, Layered Clean Architecture, RESTful API Design & Consumption (JSON, HTTP methods, Axios/Fetch, error handling), Dart, Flutter, JavaScript, PHP.

Databases & Optimization: Relational (PostgreSQL, MySQL, query indexing, execution optimization, E-R modeling) and NoSQL (MongoDB, Firebase Firestore, Redis).

Version Control, Quality & DevOps: Git & GitHub (Branching Strategies, Pull Requests, Code Reviews, Git Worktrees), Docker, Automated Testing (Unit & Integration), Performance Profiling & Metrics Collection.

AI-Assisted Engineering & Multipliers: AI-Assisted Workflows, Standardized Memory Protocols, Automated Code Verification, Rapid Prototyping & PoCs, LLM Evaluation.

Systems & Technical Operations: Automation Scripts (Python, Bash, PowerShell), Standard Operating Procedures (SOPs), Application Log Diagnostics in Linux, L1/L2 Technical Support.

FEATURED PROJECTS

E-Commerce Platform & Inventory Backend — **Java, Spring Boot, React, PostgreSQL, REST API**

- Architected back-end service with modular RESTful endpoints in Java and Spring Boot, paired with a React frontend and PostgreSQL database.
- Optimized SQL queries via indexing and pagination, **reducing average request latency by 40%** under local stress testing.
- Enforced strict data validation and JWT authentication, achieving **100% unit test coverage across core inventory business logic**.
- Source Code: github.com/example-dev/ecommerce-backend

Health Tracker & Routine Assistant — **Flutter, Dart, Firebase NoSQL, REST API**

- Developed cross-platform mobile application (iOS/Android) featuring real-time task management and push alerts.
- Implemented REST API consumption and NoSQL persistence (Firebase Firestore) with offline-first caching, **cutting network requests by 55%**.
- Managed collaborative version control via Git with feature branches, code reviews, and automated tests.
- Source Code: github.com/example-dev/health-tracker

JobHunter AI — Automated Jobs Engine & Benchmarking — **Python, Playwright, REST APIs, PoC**

- Designed automated Python engine that consumes APIs and public feeds of remote jobs, calculating algorithmic compatibility.
- Conducted latency benchmarks and accuracy metrics collection across automated ATS form workflows with automated reporting.
- Source Code: github.com/example-dev/job-hunter-ai

WORK EXPERIENCE

TechCorp Solutions — **01/2025 – Present**
Systems & IT Automation Intern — *São Paulo, Brazil*

- Developed Python scripts for automated database ingestion and data reconciliation, **cutting manual tasks by 65%**.
- Authored Standard Operating Procedures (SOPs) for server failover and incident handling, cutting resolution time by 35%.
- Monitored application error logs in Linux, assisted in optimizing SQL queries, and provided L1/L2 technical support.

Varejo Express Logistics — **06/2024 – 12/2024**
IT Operations Assistant (Technical Training & Local Support) — *São Paulo, Brazil*

- Front-line retail operations with technical cross-training for store IT hardware, POS terminals, and peripheral devices.
- Delivered L1 troubleshooting for point-of-sale systems, thermal printers, and network connectivity.

EDUCATION

Bachelor of Technology in Systems Analysis & Development — **2024 – 2026 (Expected)**
Faculty of Technology — In Progress — *São Paulo, Brazil*

LANGUAGES

English: Advanced / Fluent (Professional working proficiency) • **Portuguese:** Native
